Navigation markers, selections and file object are displayed in the marker list under the waveform. Tablet and mouse layout Supports the horizontal editing layout is available for tablet users and you can also use an external mouse for audio editing. All renderings, loading and processing are performed in the background and a notification is shown at the end. Select one of your presets to run post audio processing (volume, leveling, noise reduction - see audio algorithms), coding / tagging, voice recognition and publishing trigger with a click directly from your phone. AUPHONIC EDIT in Google Play Store (free): AUPHONIC EDIT is not a complete digital audio workstation (DAW). The recorded signal is encoded in an uncompressed wav or in compressed AAC format (mono: 128kbps, stereo: 160 kbps), written on disk each audio buffer so that no data loss occurs if the app is killed. Import your audio files can import any audio file format supported by Android, from storage devices or other apps. We use the AAC Acts format to always write a valid audio stream, even if the app is killed. It is optimized for a simple mobile recording, editing and exporting mobile audio to our web service! The focus of the integrated recorder is a robust and high quality registration: you can use the internal microphone or any external USB audio interface / microphone for professional audio quality and all the predefined pre-processing Android is deactivated to get the signal crude audio. We will always take the original audio files, so you can restore the regions / cutting files (if you do not delete the entire audio project!). Help Auphonic Edit A non-destructive audio editor, mobile and recorder with a focus on ease operating, audio and stability high quality. The volume gain and fade in/out flow the gain of a can be adjusted and to add fade in/out etc. Non-destructive editing First of all you need to create a selection (Edit -> Start Selection or Long Touch -> Start Selection), then A A you can cut the files with automatic fades or copy/paste selections (also between different audio projects). Existing audio editors for iOS and Android are often very confusing and try to include as many functions as possible. A A Jamie Bullock, see blog post iPad Audio Editor Wireframes Auphonic Edit implements the quantity minimum number of functions needed to cover the activities Most common audio editing technology, which conforms to the standard native languages of the Android user interface. In combination with the integrated Auphonic Web Service, AAA is possible to post processes, encode, tag and publish podcasts, interviews, moving music recordings with a single click. Export AuphonicClick the Auphonic button to render and export the audio project to the Auphonic Web service: Upload audio files, including metadata and chapter markers, in the background directly from Auphonic Edit to our web service. They borrow a lot from the idioms of Desktop software, and are therefore visually bulky and have many undiscovered elements. Markers will be exported as chapter markers if you create an Auphonic production. Save to FileSelect Save to File in the menu bar (upper right) to render and save the audio project to a local file on your device. The audio project can be rendered (saved) in an uncompressed WAV or compressed AAC file format (within the M4A/M4 container) and shared with any Android app or exported to the Auphonic Web service. You select the recording sampling (Auto, 44100 Hz or 48000 Hz), input channels (Mono or Stereo) and also supports External storage (USB keys, SD cards, external hard drives, etc.) during recording and editing audio files. Displaying the waveform the main interface is the display of the complete waveform of the audio signal, where a C M A C M can enlarge / reduce enlarge / reduce (time) and vertically (levels), to create selections, search and scroll through the audio project. We automatically apply real-time down/upmixing and reampling to fit your current audio project settings, using Sox's high-quality resampling algorithms. Share audioClick the Share button to render and share the audio project with any other Android app. Long tap on the list items to see more information (file/marker details), to delete bookmarks/selections/files, to restore cuts, edit selections, change titles, etc. The recording interface shows the current maximum level, available recording time (storage), you can add and modify Chapter Markers and A A you can record in the background while using other Android apps or while the screen is off. Click on the start (or end) time of the marker/selection/file for accurate audio navigation. All rendering is done in the background and a notification is displayed at the end. Built-in HelpSelect Show Help in the menu bar (top right) to get an initial overview of how to use Edit Auphonic. © Copyright 2022, Auphonic. Note For our compressed AAC format, we use an MP4/M4A container, because it might get damaged in the event of a crash.
